STUDY NOTES

Microsoft Power Point

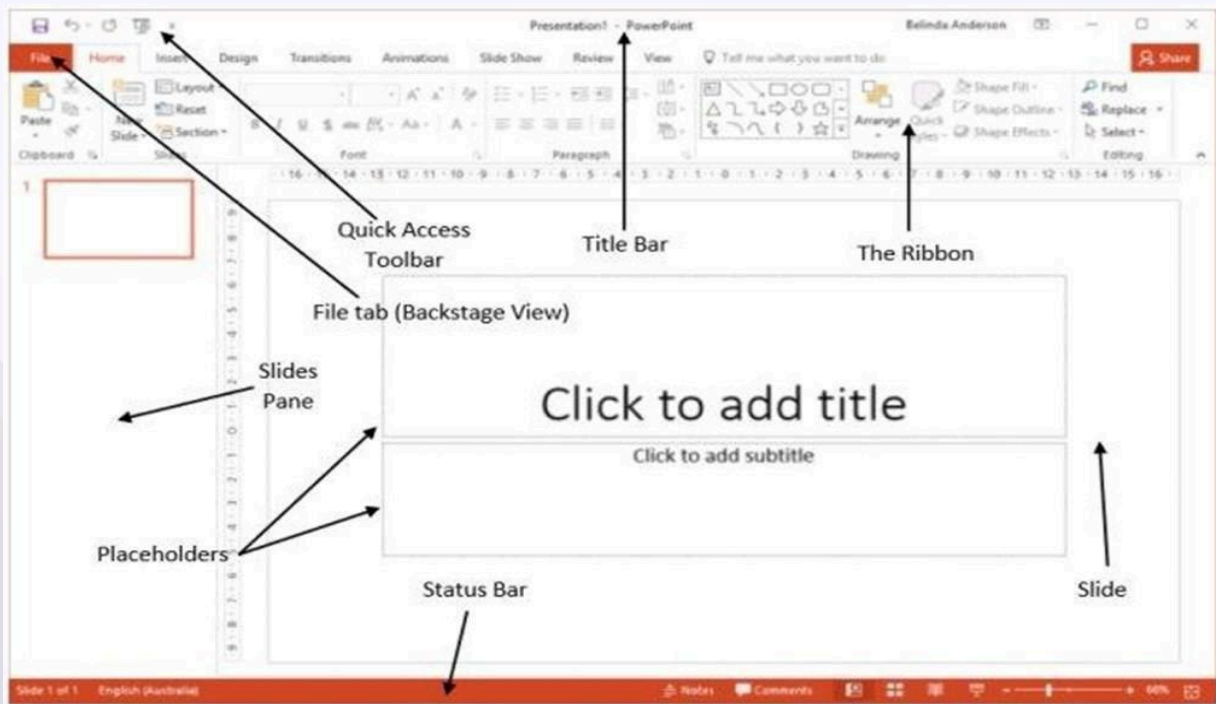

Microsoft Power Point

Microsoft PowerPoint is a powerful slide show presentation program. It is a standard component of the company's Microsoft Office suite software, and is bundled together with Word, Excel, and other office productivity tools. The program uses slides to convey information rich in multimedia.

Microsoft PowerPoint is a software application that is particularly used to present data and information by using text, diagrams with animation, images, and transitional effects, etc in the form of slides. It helps people to better understand the idea or topic in front of the audience practically and easily.

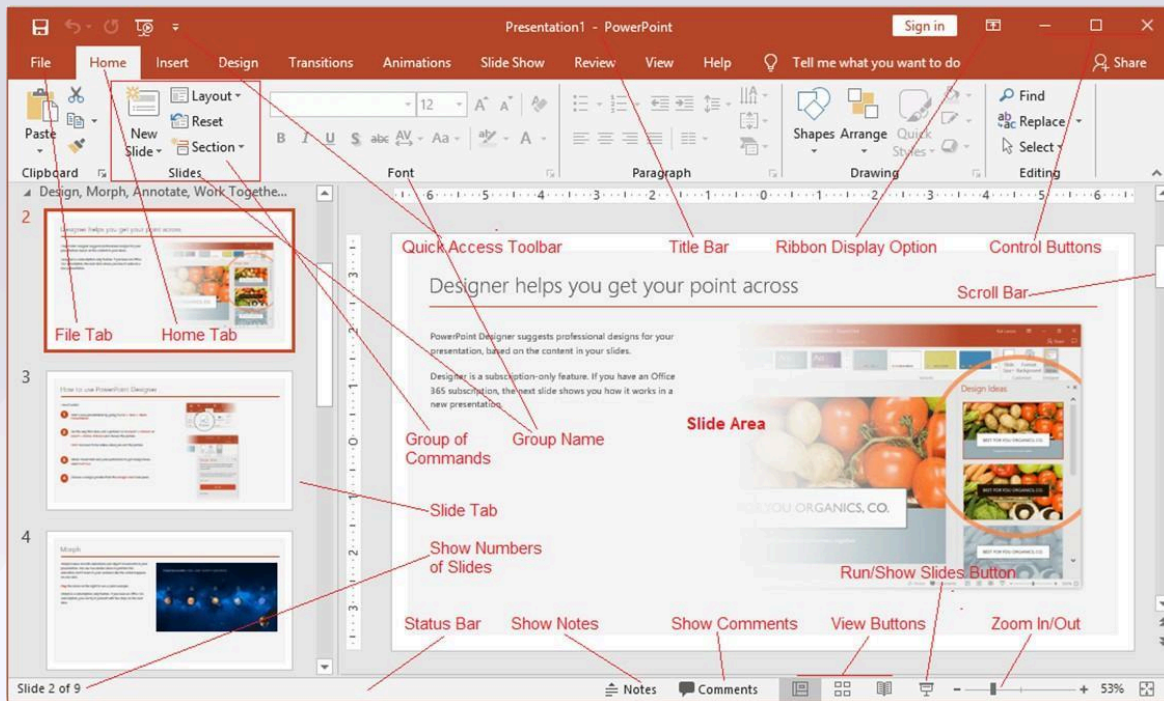

Why we use PowerPoint

- PowerPoint is a presentation software package. PowerPoint presentation consists of a number of individual pages or “slides.” Slides may contain text, graphics, tables, movies, etc.
- The presentation can be printed, displayed on a computer, and can be projected using a video projector. PowerPoint can add animation to your texts, graphics, tables, movies, and other objects through Custom Animations. You can also add transition (movement) between your slides.

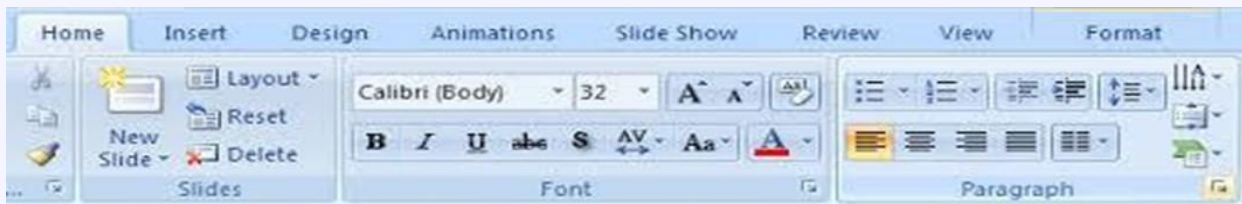

PowerPoint 2010 has a new, intuitive user interface called the Microsoft Office Fluent User Interface, which helps you create better presentations quicker. Additionally, PowerPoint 2010 offers new and improved effects, themes, and layouts.

Title Bar	Displays the name of the application and the file currently in use.
The Ribbon	Displays the numerous functions and tools available to work with your presentation.
Quick Access Toolbar	Enables you to customise the toolbar to contain the commands you use most frequently.
File tab (Backstage View)	Provides access to basic commands such as New, Open, Save, Print and Share plus access to customise the application.
Slides pane	Displays a thumbnail version of each slide within the presentation.
Slide	The area which will be displayed as full screen when viewed in Slide Show mode.
Status Bar	Provides information relating to features such as slide number, spell check and shortcuts to Notes, Comments, various different views and zoom functions.
Placeholder	Displayed as dotted lines which allows you to identify where you can add text, and insert elements such as images or tables.

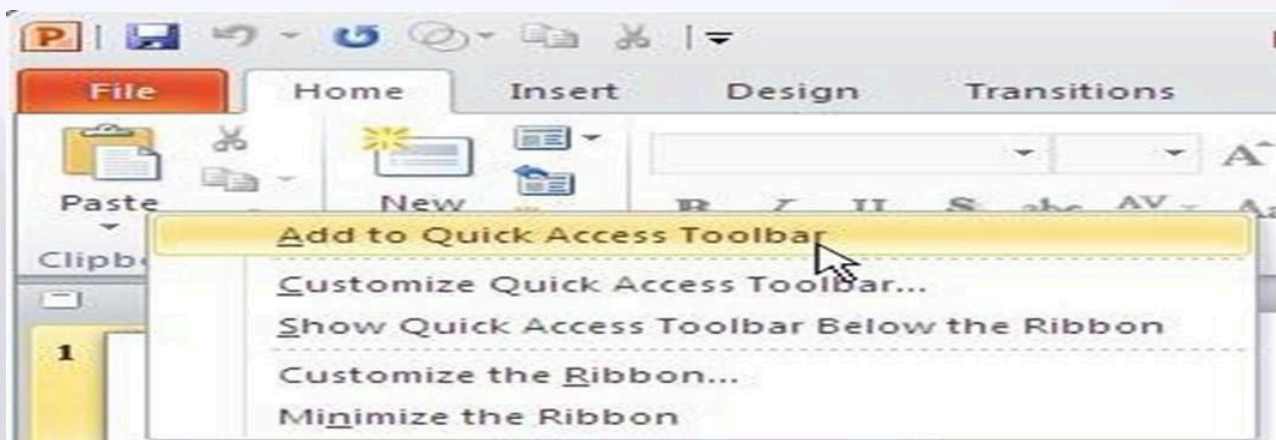

Microsoft Office Home

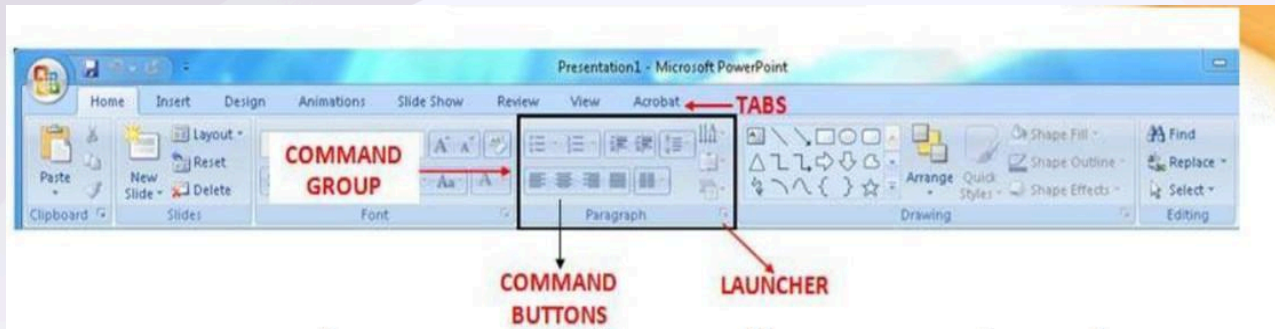

In the upper-left corner is the Microsoft Office button. When you click the button, a menu appears. You can use the menu to create a new file, open your existing file, save a file, and print a file.

Quick Access toolbar

Next to the Microsoft Office button is the **Quick Access toolbar**. The quick access toolbar is a customizable toolbar that contains commands

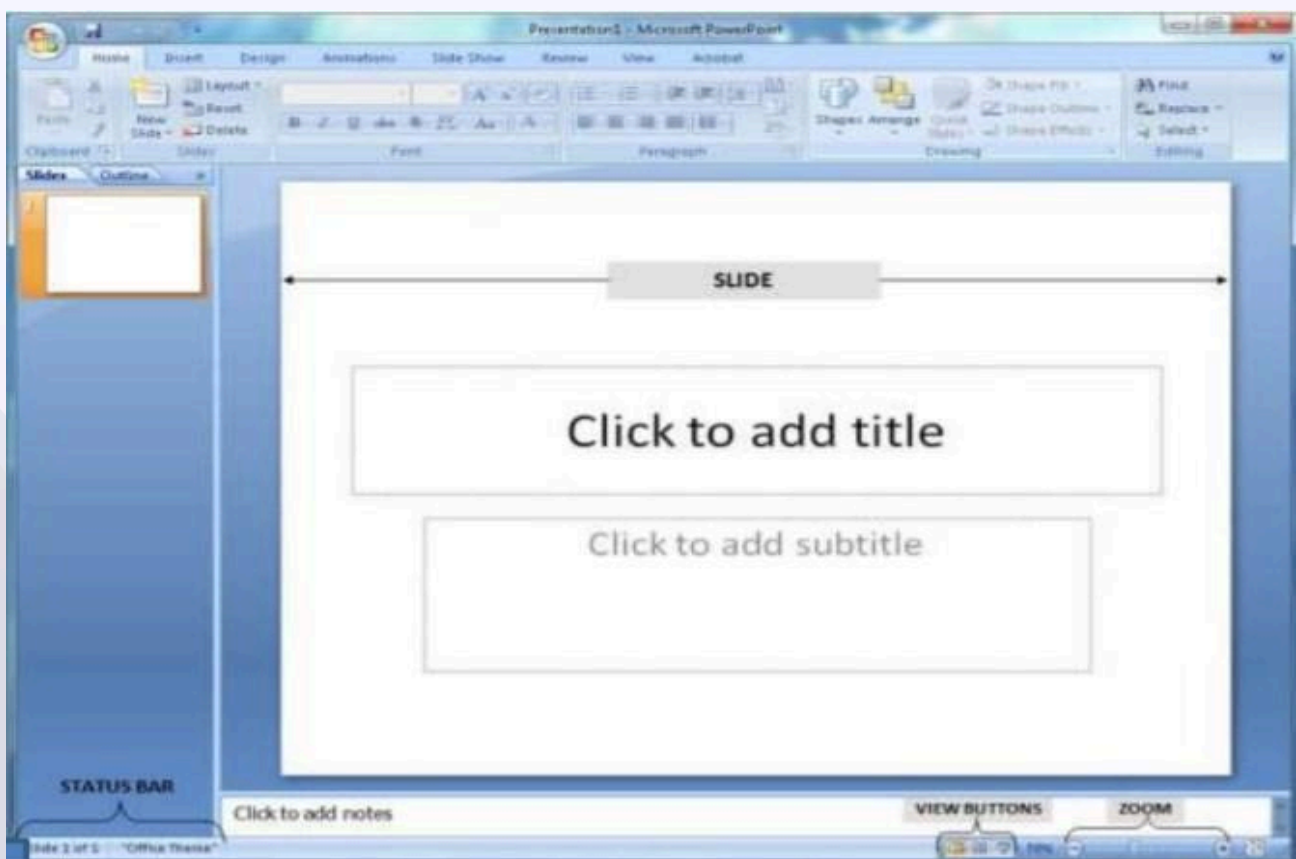

The Ribbon

You can use the commands to tell PowerPoint what to do. The Ribbon is located at the top of the PowerPoint Window. At the top of the Ribbon there are several tables; clicking a table displaces several replanted group commands.

You can click on the command buttons to issue commands or to access menus.

PowerPoint Window

STATUS BAR

Appears at the bottom of the window. The status bar displays the slide number that is currently displayed and also the total number of slides.

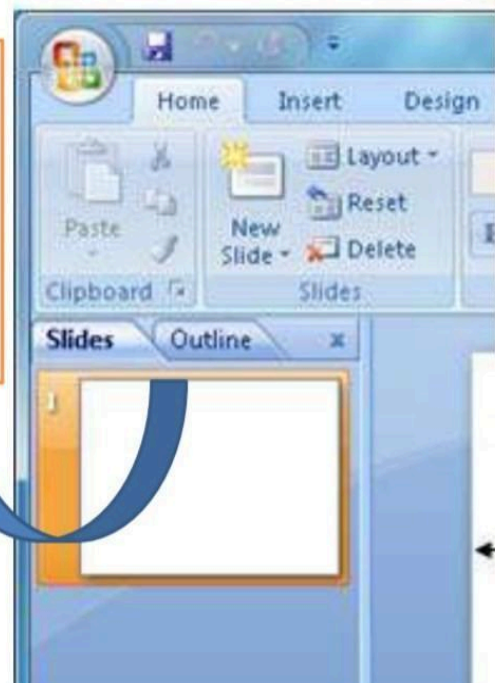

SLIDE SHOW

Use the slide show view when you want to view your slides as they will look in your final presentation

PowerPoint Window

OUTLINE/SLIDES TABS

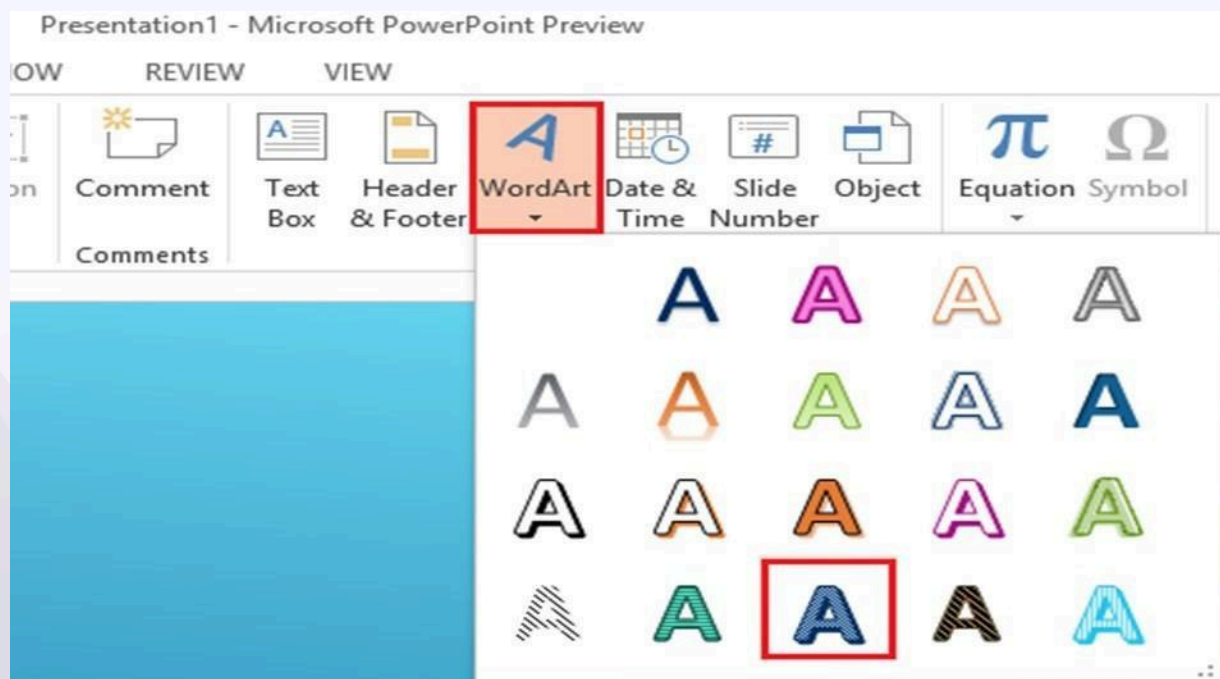

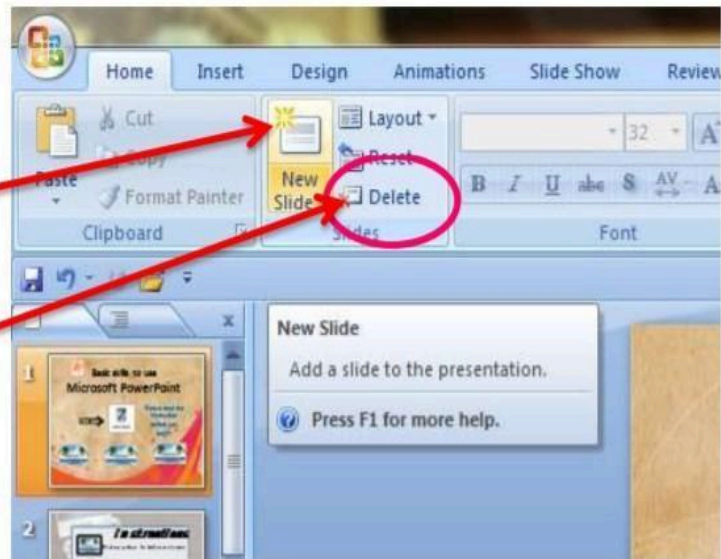

Displays the text contained in your presentation. The slides tab displays a thumbnail of all your slides.

Click to delete slide

Saving Your Work

Saving for the First Time Click Microsoft Office Button Click Save Renaming and Saving as an Earlier Version and type of show PowerPoint Click Microsoft Office Button Click Save As Choose the type that you want.

Slide and Slideshow

- Think back to the days of the old-fashioned slideshow that used a slide projector. PowerPoint produces an updated version of sorts. Slideshows can comprise text and graphics or be completely covered by a single picture, as in a photo album.
- Each page of a PowerPoint presentation is called a slide. The default orientation of the slide is landscape. You can change the slide orientation and the slide size. Add text, graphics, and pictures to the slide to enhance its appeal and illustrate your point.

Bullet or Bulleted List

- Bullets are small dots, squares, dashes, or graphic objects that begin a short descriptive phrase. Almost every slide type in PowerPoint contains a placeholder text box for a bulleted list. You'll use these bulleted list text boxes to enter key points or statements about your topic. When creating the list,

press **Enter** to add a new bullet for the next point you want to add.

Design Template

- Think of a design template as a coordinated package deal. When you decorate a room, you use colors and patterns that work together. A design template acts in much the same way. Even though different slide types can have different layouts and graphics, the design template ties the whole presentation together in an attractive package.

Slide Layouts and Slide Types

- The terms slide type and slide layout are used interchangeably. PowerPoint has a few types of slide layouts. Depending on the type of presentation you are creating, you may use several different slide layouts or just keep repeating the same few.
- Slide types/layouts include, for example:
 - ◇ Title slides
 - ◇ Section heading slides
 - ◇ Picture with caption slides
 - ◇ Content slides for adding charts, pictures, and tables
 - ◇ Blank slides

Slide Views

There are several ways to view slides and slideshows. These views are:

- **Normal view:** Also commonly known as slide view. It is the main working window in the presentation. The slide is shown at its full size on the screen.
- **Outline view:** Shows all the text of all slides, in a list on the left of the PowerPoint screen. No graphics display in this view. Outline view is useful for editing and can be exported as a Word document to use as a summary handout.
- **Slide Sorter view:** Displays thumbnail versions of all your slides, arranged in

horizontal rows. This view is useful for making global changes to several slides at one time. Rearranging or deleting slides is easy to do in slide sorter view.

- **Notes Page view:** Shows a smaller version of a slide with an area underneath for notes. Each slide is created on its own notes page. Print these pages to use as a reference while making the presentation. The notes do not show on the screen during the presentation.

Task Pane

- Located on the right side of the screen, the task pane changes to show options that are available for the current task that you are working on. For example, when changing the background for a slide, the Format Background task pane appears; when adding animations, you'll set animation options in the Animation pane.

Transition

- Slide transitions are the visual effects that appear as one slide changes to another. PowerPoint offers several different transitions, such as fade and dissolve.

Animations and Animation Schemes

- In Microsoft PowerPoint, animations are visual effects applied to individual items such as graphics, titles, or bullet points, rather than to the slide itself. Apply preset visual effects to paragraphs, bulleted items, and titles from a variety of animation groupings.

PowerPoint Online

- PowerPoint Online is the web version of PowerPoint. It allows a PowerPoint presentation to be played on any computer, even one that doesn't have PowerPoint installed. To use PowerPoint Online, you'll need a Microsoft account or an Microsoft 365 work or school account. To view a presentation in a web browser, save the presentation to OneDrive or Dropbox and open it in PowerPoint Online.

Slide Master

- The default design template when starting a PowerPoint presentation is a plain, white slide. When you want to design your own template, use the Slide Master.
- After you update the Slide Master with your design choices, all the slides in your presentation will use the fonts, colors, and graphics in the Slide Master. Each new slide that you create takes on these aspects.

General Program Shortcuts

First, let's review some general keyboard shortcuts for opening, closing, and switching between presentations, as well as navigating the Ribbon.

- **Ctrl+N**: Create a new presentation
- **Ctrl+O**: Open an existing presentation
- **Ctrl+S**: Save a presentation
- **F12 or Alt+F2**: Open the Save As dialog box
- **Ctrl+W or Ctrl+F4**: Close a presentation
- **Ctrl+Q**: Save and close a presentation
- **Ctrl+Z**: Undo an action
- **Ctrl+Y**: Redo an action
- **Ctrl+F2**: Print Preview View
- **F1**: Open the Help pane
- **Alt+Q**: Go to the "Tell me what you want to do" box
- **F7**: Check spelling
- **Alt or F10**: Turn key tips on or off
- **Ctrl+F1**: Show or hide the ribbon
- **Ctrl+F**: Search in a presentation or use Find and Replace

- **Alt+F:** Open the File tab menu
- **Alt+H:** Go to the Home tab
- **Alt+N:** Open the Insert tab
- **Alt+G:** Open the Design tab
- **Alt+K:** Go to the Transitions tab
- **Alt+A:** Go to the Animations tab
- **Alt+S:** Go to the Slide Show tab
- **Alt+R:** Go to the Review tab
- **Alt+W:** Go to View tab
- **Alt+X:** Go to the Add-ins tab
- **Alt+Y:** Go to the Help tab
- **Ctrl+Tab:** Switch between open presentations

Selecting and Navigating Text, Objects, and Slides

You can use keyboard shortcuts to navigate throughout your presentation easily. Try these shortcuts for quick and easy ways to select text within text boxes, objects on your slides, or slides in your presentation.

- **Ctrl+A:** Select all text in a text box, all objects on a slide, or all slides in a presentation (for the latter, click on a slide thumbnail first)
- **Tab:** Select or move to the next object on a slide
- **Shift+Tab:** Select or move to the previous object on a slide
- **Home:** Go to the first slide, or from within a text box, go to the beginning of the line
- **End:** Go to the last slide, or from within a text box, go to the end of the line
- **PgDn:** Go to the next slide
- **PgUp:** Go the previous slide

- **Ctrl+Up/Down Arrow:** Move a slide up or down in your presentation (click on a slide thumbnail first)
- **Ctrl+Shift+Up/Down Arrow:** Move a slide to the beginning or end of your presentation (click on a slide thumbnail first)

Formatting and Editing

The following keyboard shortcuts will save you time so you can edit and format in a snap!

- **Ctrl+X:** Cut selected text, selected object(s), or selected slide(s)
- **Ctrl+C or Ctrl+Insert:** Copy selected text, selected object(s), or selected slide(s)
- **Ctrl+V or Shift+Insert:** Paste selected text, selected object(s), or selected slide(s)
- **Ctrl+Alt+V:** Open the Paste Special dialog box
- **Delete:** Remove selected text, selected object(s), or selected slide(s)
- **Ctrl+B:** Add or remove bold to selected text
- **Ctrl+I:** Add or remove italics to selected text
- **Ctrl+U:** Add or remove underline to selected text
- **Ctrl+E:** Center a paragraph
- **Ctrl+J:** Justify a paragraph
- **Ctrl+L:** Left align a paragraph
- **Ctrl+R:** Right align a paragraph
- **Ctrl+T:** Open the Font dialog box when text or object is selected
- **Alt+W,Q:** Open the Zoom dialog box to change the zoom for the slide
- **Alt+N,P:** Insert a picture
- **Alt+H,S,H:** Insert a shape
- **Alt+H,L:** Select a slide layout
- **Ctrl+K:** Insert a hyperlink

- **Ctrl+M:** Insert a new slide
- **Ctrl+D:** Duplicate the selected object or slide.
